

EHNAC

Advancing Healthcare Business

EHNAC accreditation gives your prospects and customers full confidence in your privacy, security, performance, business practices and resources involved in healthcare information exchange and handling. With recognition from EHNAC, your organization raises awareness about the quality of its products and services as well as compliance with industry standards. In an increasingly competitive marketplace, EHNAC accreditation can build the trust that will advance your business.

Data Registry Accreditation Program (DRAP)

The Centers for Medicare and Medicaid Services' (CMS) mandated use of Qualified Data Registries to report Clinical Quality Measures (CQMs) associated with Meaningful Use, PQRS, GPRO, DSRIP, HEDIS, CHIPRA, etc. spotlights the need to ensure that these entities meet the privacy and security obligations expected of all large scale handlers of protected health information (PHI).

EHNAC's Data Registry Accreditation Program was developed to recognize superior capabilities through the extensive review of data registry stakeholders in the areas of privacy, security, mandated standards and key operational functions. DRAP assesses health information and oversight for meeting privacy and security, HIPAA, HITECH, Omnibus Rule and ACA requirements, as well as technical performance, business processes and resource management.

The comprehensive third-party review provides an additional level of confidence for organizations that are under industry competitive pressures to demonstrate the rigor and structure of the registry database as envisioned and supported by CMS.

Stamp of Approval

EHNAC's DRAP serves as a "stamp of approval," providing your stakeholders with third-party assurance in both the management of PHI and a data registry's overall corporate integrity. In summary, the DRAP is:

- **Transparent:** DRAP provides independent evaluation of your organization's ability to provide for a secure, high-quality and efficient, exchange network.
- **Flexible:** DRAP has been developed through a consultative and consensus-driven process that incorporates public comment and pilot testing.
- **Respected:** Building stakeholder trust is critical to the success of any data registry, and DRAP provides that third-party oversight.
- **Progressive:** EHNAC revises and updates its accreditation criteria regularly, reflecting clinical advances, incorporating evolving stakeholder needs, addressing new healthcare legislative mandates, and continuously improving program administration for realistic healthcare exchange solutions.
